

Note: We aknowledge that for deliverable #1 the goal was to "implement the student and tutor registration forms" (and set up Github users and repositories). Deliverable #2 was about implementing administrator functionalities, allowing admins to view their inbox of requests (of student and tutor registration froms developed in deliverable #1), accept requests, reject request, and view list of rejected requests allowing them to change their decision on rejected requests. And deliverable #3, was implementing tutor functionalities like

And how, the respective method functionalities for students is developed the 4th deliverables. Despite this, we still decided to include the respective methods in this UML diagram, as class diagrams typically include respective attributes, and methods.
